

CONTINUOUS CHEVRON

Highly aggressive design for unmatched grip of belt to hay surface. 3 ply patented construction designed as **original equipment** for: **HESSTON:** 540, 545, 550, 555, 560, 565, 845, 855 and 856. **CASE IH:** 8430, 8435, 8450, 8455, 8460, 8465, RS451, RS551, RS561, RBX441, RBX451, RBX561.

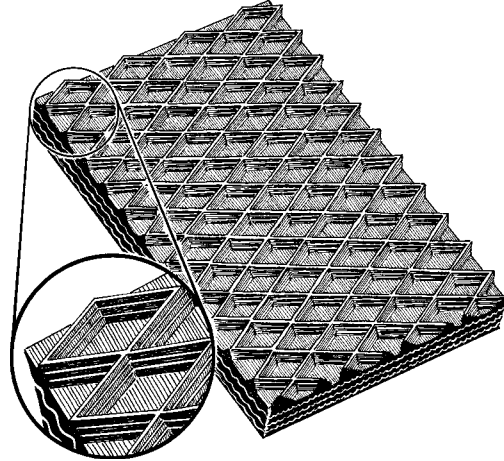

NEW IDEA: 4644, 4664, 4665, 6344, 6345, 6364, 6365.

DIAMOND TOP

A proven performer for all John Deere Balers produced since 1981. 3 ply patented construction designed as **original equipment** and **replacement** for:

John Deere: 330, 335, 430, 435, 530, 535, 447, 456, 457, 466, 467, 556, 557.

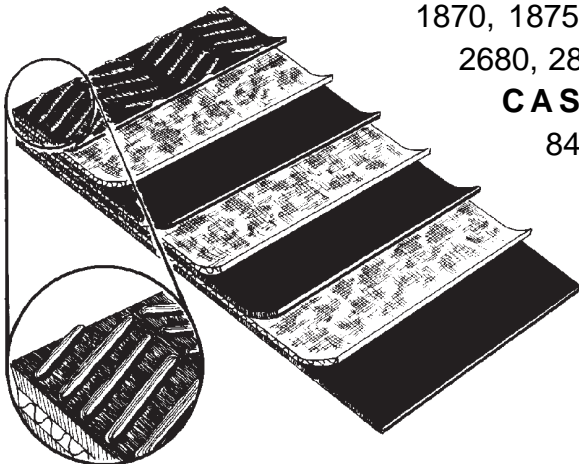

CHEVRON

Aggressive low profile design used by O.E.M.'s for over 20 years. 3 ply patented construction designed as **original equipment** for:

HESSTON: 5500, 5510. **GEHL:** 1470, 1475, 1870, 1875, 2580, 2680, 2880.

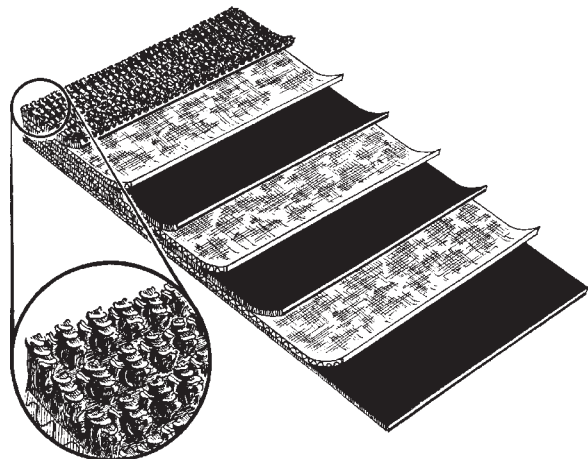

CASE-IH: 8440

ROUGH TOP

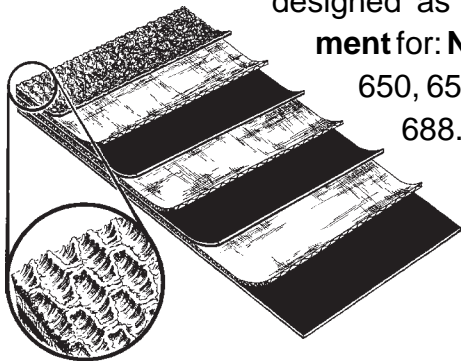

Standard matrix rough top provides a positive gripping surface between belt and hay.

3 ply construction designed as **original equipment** for: **HESSTON:** 5540, 5580.

MINI ROUGH TOP (.30)

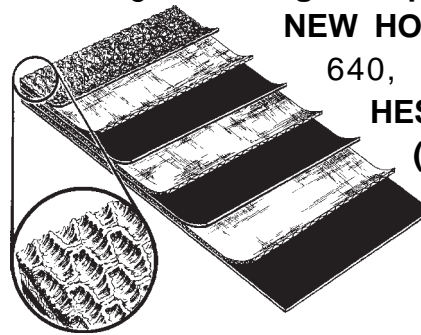

The heavy weight of MRT.
Low profile texture provides fast bale starts and gentle crop rotation. 3 ply patented construction designed as **original equipment** for: **NEW HOLLAND:** 650, 654, 658, 660, 664, 688.

MINI ROUGH TOP (.26)

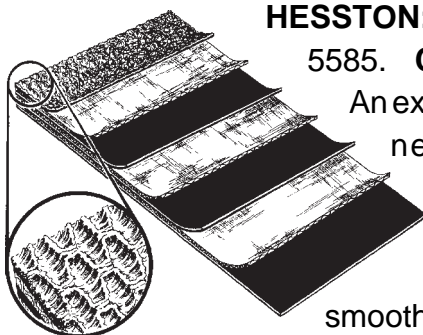

Our medium gauge MRT.
Same low profile texture provides fast bale starts and gentle crop rotation. 3 ply patented construction designed as **original equipment** for:

NEW HOLLAND: 630, 634, 640, 644, 648, 678.
HESSTON
(Late Models): 845, 846, 855, 856.
NEW IDEA
(Late Models): 6345, 6364, 6365

MINI ROUGH TOP (STANDARD)

Our standard gauge MRT.
Same low profile texture provides fast bale starts and gentle crop rotation. Patented 3 ply construction designed as **original equipment** for: **GEHL:** 1456, 1865, 2480, 2780.

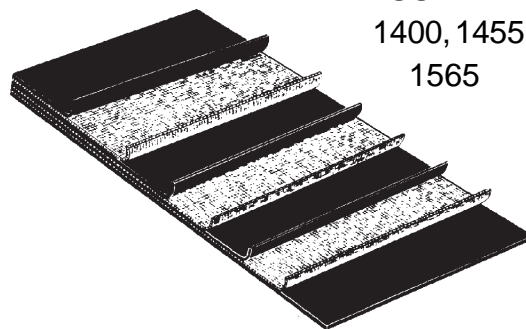

HESSTON: 530, 5545, 5565, 5585. **CASE-IH:** 8420.

An excellent choice when needing increased performance on older model balers which had smooth belts as original.

300 SERIES

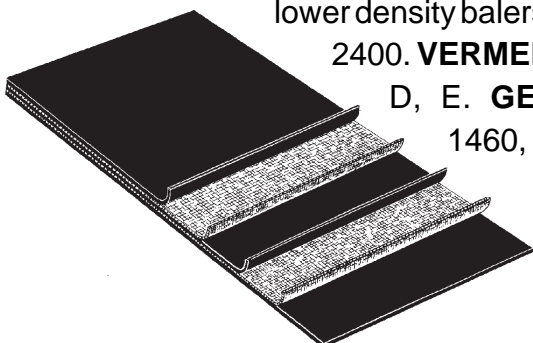

3 ply patented construction designed for heavy weight baling operations and high density balers, using a smooth covered belt. Popular choice with **VERMEER:** 504, 505, 604, 605, F, G, H, I, J, K, L. **JOHN DEERE:** 410, 510.

MASSEY FERGUSON: 1400, 1455, 1500, 1560, 1565

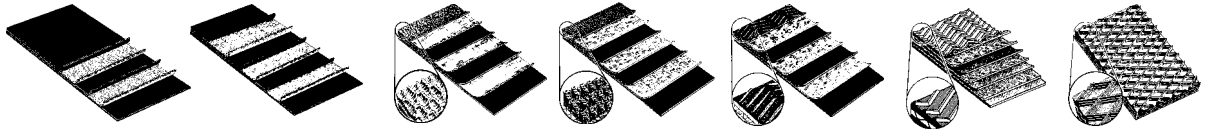

200 SERIES

2 ply construction with rubber cover on both sides. General purpose baler belt for use on older model lower density balers. **IHC:** 241, 2400. **VERMEER:** A, B, C, D, E. **GEHL:** 1450, 1460, 1850, 1860

TECHNICAL NOTES: For faster bale starts of fixed chamber (soft core) balers, install 3MRT series belts, especially on the bottom and lower tailgate areas. The **textured bottom assists** in pulling hay into the bale chamber while the **lower** tailgate belts turn the hay in starting the core.

	TECHNICAL NOTES: You may notice .26 or .30 thick MRT belts for late model Case-IH, Hesston and New Idea balers. Both are O.E.M. specified.		TECHNICAL NOTES: You may choose to replace late production MRT series belts with the popular Continuous Chevron belts (when installed as a complete set). Do not mix MRT style belts with or next to Continuous Chevron belts.

REPAIR TIPS: When resizing Deere belts back to original length, consider this. Instead of adding repair pieces to lengthen all belts, take the original long belts and cut them back to the original short belt length (no repair piece needed). Take the original short belts and add a repair piece and lengthen them to the original long belts. RESULTS: Fewer double belt splices.

TECHNICAL NOTE: It is critical to have a 6" length difference between the long and short belts.

TECHNICAL NOTES: For faster bale starts of fixed chamber (soft core) balers, install 3MRT series belts, especially on the bottom and lower tailgate areas. The textured **bottom** assists in pulling hay into the bale chamber while the **lower** tailgate belts turn the hay in starting the core.

Prairie Belting list belt assemblies which meet or exceed original requirements. When you find N/A listings, this generally means that belt style or construction does not meet O.E.M. specifications. You will find many baler models where we offer various up-grade from the original belt style.

EXAMPLE 1: Original specification 2-ply
Up-grade options may include 300s / 3 ply or 3MRT / 3 ply.

EXAMPLE 2: Original specification - Clipper Hooks
Up-grade options may include Titan or Flexco Rivet.

****After 5 bales, recheck belt tension-tighten belt if necessary.**

****BOTTOM BELTS REQUIRE FULL TENSION AT ALL TIMES**

* A LOOSE BOTTOM BELT WILL TRACK OUT OF THE V-GUIDE AND ROLL OVER.

* ALWAYS CHECK BOTTOM BELT TENSION BEFORE BALING

INSTALL CABLE:

* We have attached a leader wire to the cable for easier installation.

DO NOT JERK on leader wire with pliers, it will come off.

* Simply snip off the leader wire after installed.

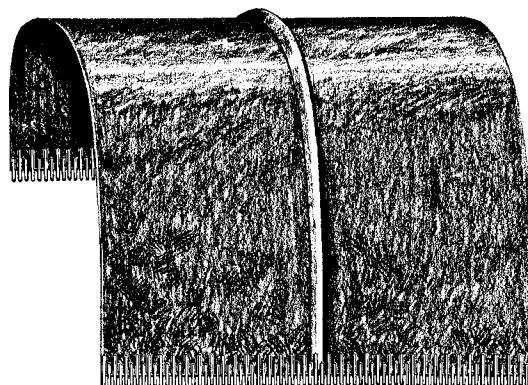

* Tuck the cable back into the hooks on end being pulled.

AFTER INSTALLING BELT:

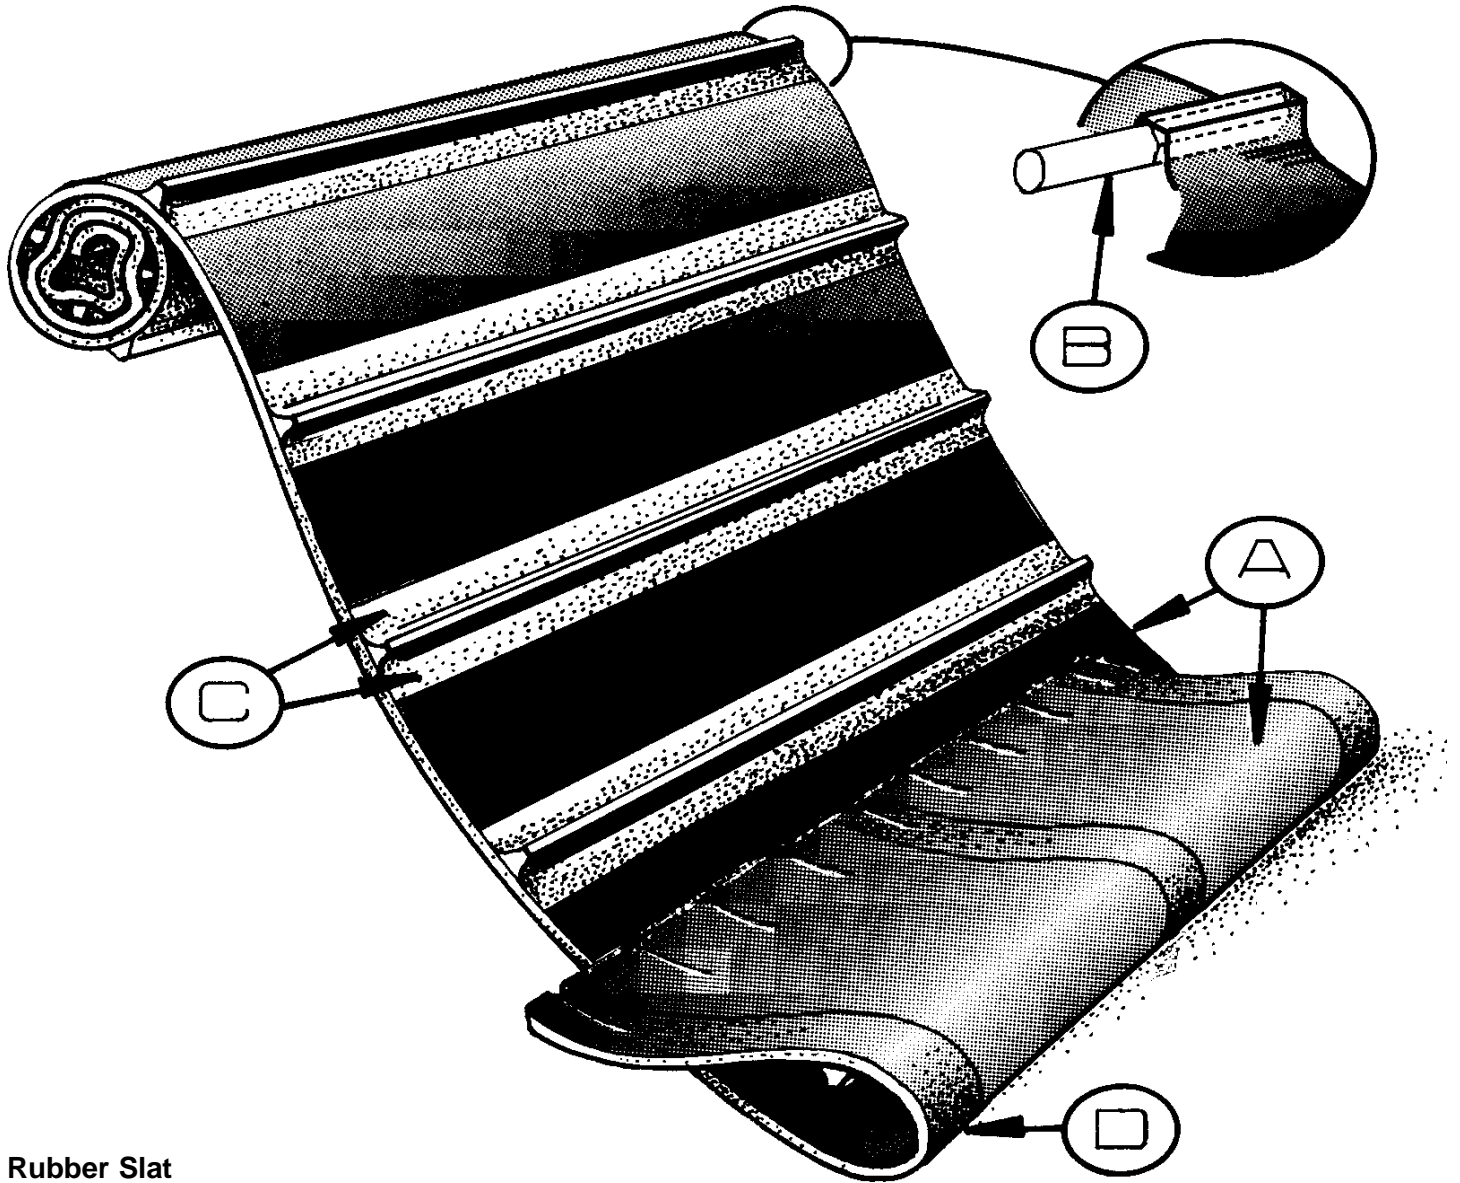

* Take up roller adjustment to recommended tension (Belt must be tight)

* Run the baler momentarily to check for belt tracking.

All Bottom Belts laced with Clipper Hooks including #332 nylon covered cable with attached leader wire for fast & easy installation.

TECHNICAL NOTES: Most problems related to bottom belts are due to lack of tension. This allows the belt to slide out of the V-groove and roll up on its side. When installing a new belt, be sure to re-check belt tension after a few bales.

**Rubber Slat
Series**

Prairie Belting's premium replacement belting for pull-type and self-propelled swathers. Prairie Belting incorporates a **rubber cover** on both sides of its canvas which provides added protection against premature wear, abrasion, moisture, sunlight and ozone (see A). Each cleat is vulcanized under heat and pressure to become an integral part of the belt. **Fiberglass reinforcement rods** are standard on Prairie Belting's rubber slat series belting (see B). An extra wide reinforced cleat base with 5/8" square edged cleats provides a stronger bond between the cleat and belt in addition to greater carrying capacity (see C). Rubber slat series swather belting has doubled vulcanized edge reinforcement for added strength and durability. (see D).

TECHNICAL NOTES: The full slat will not fit on older 8200 series Case-IH P.T. Swathers (pre-1994) due to interference in the draper guide tract flange at the rear of the header. Full slats may be used if this flange is removed. You may also cut off the "D" rings on the underside of the cutter bar that ties down machine during shipment. "D" rings can build up trash and effect draper tracking. In 1993 and newer models, "D" rings were repositioned to eliminate this build-up potential.

NOTE: Generally, tub grinders which have cleated belts installed as original require cleated replacement belts to reduce the hay rolling back to the bottom of the conveyor. The higher the elevation, the increased need for a cleated belt.
